

# CFOSAT Session Discussion

So now... What more do you want to know about CFOSAT?

How can CFOSAT complement other altimeter mission objectives?

- in terms of enhanced spatial coverage for SWH (including 2-D gradients)
- in terms of new products (wave period, directional spectra of waves, alt+scatterometer wind)
- Could SSH be derived from the CFOSAT altimeter?
- In terms of new/enhanced applications (MIZ, coastal, wave-current)
- New insights for sea state bias correction?
- Interpreting interferometric altimeter data (e.g. SWOT)?
- Understanding swell impacts on Delay Doppler (and/or GNSS, SKIM,..)?
